Dates: 01/20/2015 – 05/11/2015

Course Number: DI 125

Course Title: Introduction to Echocardiography

Credit Hours: 4 units = 3 units of lectures + 1 unit of laboratories  
(75 total contact hours = 45 hours of lectures + 30 hours of lab work)

Lectures: Wednesday 9:00 am – 11:45 am

INSTRUCTOR: Oxana Ostanina, MD, RDCS

Laboratories: Tuesday 2:30 pm – 4:15 pm

INSTRUCTOR: Dr. Seyed Sadatian, RDCS

CONTACT INFORMATION: ostanina@lincolnuca.edu

OFFICE HOURS: By arrangement

RESOURCE OF MATERIALS:

Echocardiography:

Echocardiographer’s Pocket Reference, 3rd edition [Spiral-Bound], 2008, Terry Reynolds
Additional recommended textbooks and instructional materials will be given during classes.

COURSE DESCRIPTION:
This introductory course focuses on normal heart anatomy, scanning techniques, cardiac measurement, and new dynamics. (4 units)

Prerequisites: DI 110, DI 115

LEARNING OBJECTIVES:
Upon satisfactory completion of this course, the students will be able to:

- Utilize Two-dimensional echocardiography, identify and assess the normal anatomical structures of the heart and great vessels.
- 2D/M-mode Anatomy – identify basic two-dimensional and M-mode anatomy and the structures contained within each image displayed.
- Spectral and Color Doppler – identify direction and velocity information given in the color and spectral Doppler images/waveforms.
- Basic Doppler Calculations – perform basic Doppler calculations, i.e., stroke volume, cardiac output and valve areas.
- Cardiac Physiology – explain the electrical and mechanical events within the cardiac cycle.
- Cardiac Hemodynamics – explain normal hemodynamic parameters, including intracardiac pressure and oxygen saturation.
- Basic EKG and Auscultation – describe the normal EKG and commonly encountered abnormal EKG findings. Explain normal and abnormal heart sounds and their relationship to the cardiac cycle.
- Systolic Function – describe basic echocardiographic measurement parameters to assess LV and RV systolic function.
- LA, RA, and RV Function – explain and describe the basic echocardiographic measurement parameters that assess LA, RA and RV normal and abnormal function.
- Normal Examination – describe the ASE recommended views and measurements in the complete normal transthoracic echocardiogram.

INSTRUCTIONAL METHODS:
- Lectures and assigned reading material
- Internet resources
REQUIREMENTS:

- **Ultrasound Hands-on Laboratory Training**
  Practical experience students will gain under the guidance of a lab instructor. Students are expected to arrive at class on time, and stay through the end of the ultrasound laboratory class.

ATTENDANCE AND PARTICIPATION:

- Class attendance is required, beginning with the first class meeting, and students are expected to attend all class sessions for which they are registered.
- **Promptness** is required.
- It is the responsibility of the student to make arrangements for all course work missed because of legitimate class absences and to notify the instructor when an absence will occur.
- Excessive absence or tardiness may result in loss of credit, lowering of grade, or dismissal from the university.
- Cell phones MUST be turned off before class begins. Students are not allowed to use cell phones during the class.

EVALUATION:

- **Quizzes:**
  - The student will take 3-4 quizzes 10-15 questions each at the beginning of the class.
  - These quizzes will address the detailed content and major concepts presented in the lectures, lecture outlines, text readings, and study guide activities.
  - Each quiz will be timed, 72 seconds for every question to complete.
  - Late assignments will not be collected or graded.
  - No make-up quizzes for missed quizzes will be administered (the student will receive no score for missed quizzes).
  - All quizzes and exams may include a video portion to assess identification and recognition of echocardiographic structures, views, and or measurements.

- **Midterm & Final Examinations:**
  - Midterm consists of 50 questions and final examination of 100 questions.
  - The written examinations are proctored and will be closed-book exams.
  - The Scranton machine will be used in grading multiple-choice tests.
✓ A student MUST take the exam during the scheduled time period.
✓ A student missing an exam because of an illness or legitimate emergency may take a make-up exam as soon as possible after the student returns from the illness and as determined by the instructor. Absences covering such emergencies as serious illness or similar may be excused by the Dean provided the absence is properly documented.
✓ If no excuse is received by the Records Office, the student will be considered as having no excuse.

❖ Ultrasound Hands-on Laboratory Examination:
  ✓ In the final ultrasound hands-on examination, students have to demonstrate understanding of information presented during lectures and hands-on laboratory training.
  ✓ Students have to perform echocardiographic protocols and demonstrate scanning technique and images in B-, Color-Modes, and M-mode.
  ✓ Students will schedule the time and date 2-3 weeks ahead of the Ultrasound hands-on laboratory examination.
