

Lincoln University

Course Title	Operations Management	Instructor: Walter Kruz
Course No.	BA 307	Contact: wrkruz@lincolnuca.edu
Units	3 (45 lecture hours)	Office Hours: By arrangement
Class Hours	Tues/Thurs 6:30-9:15 PM	
Semester	Summer 2014	

Textbook:

Operations Management, by Stevenson. 11th edition, ISBN 978-0-07-352525-9

Course Description:

The objective of this course is to prepare the graduate student for management of core operations of an organization. It will review core operations of manufacturing product design, sourcing and purchasing, scheduling and control, productivity improvements and overall supply chain design and management. In the industry the course will review asset acquisition, business segments, production planning, job design, and overall productivity analysis and improvement. *Prerequisite: MATH 10*

Learning Objectives:

By taking the course, students will learn three basic principles of modern operations management; supply chain management, product and service design, and quality management. Through additional materials and project work, students will become familiar with various industries and products of their interest.

Methodology:

This is a highly interactive learning environment. All students will participate in class discussions, research findings, and class exercises. Short oral presentations may also be assigned. Assignments will be given weekly and may consist of textbook exercises and research questions. Attendance is highly encouraged as exams include questions from class discussions and quizzes are expected at every session.

Standards:

Standards for this class are similar to those found in professional organizations. All assignments are due on the date indicated and collected during the first 10 minutes of the class. Late assignments will not be collected or graded. Make-up exams are allowed only due to a documented medical excuse, and if so, a 10% point reduction is in effect. Students are encouraged to study and work in groups for enhanced learning.

Project:

Project work is designed to familiarize students with an industry or product of their interest. Projects may be assigned individually or as a group project. If as a group, the grade is the same for all members. Drafts may be evaluated on an agreed upon schedule during the semester. Final deliverable will be turned in as a hard copy. Plagiarism is not allowed; all sources must be referenced. The summer session may not require a project. Delivering a project already submitted for other classes will earn 0 points.

Testing:

Typically, the class will consist of two or three exams of equal weight throughout the semester. All exams are individual deliverables. They consist of short answers related to the material being discussed and some mathematical problems. The exam format is usually closed book with no electronic devices allowed.

Grading:

Quizzes, homework assignments, exams, and the project allow students to accumulate points throughout the semester. These are added and compared against the total possible as a percentage.

Exams and Project are typically worth 100 pts each (~ 75% of the total points). Homework and quizzes from 5-10 pts (~ 25% of the total points). Assuming that 2 exams, one project, and 10 homework assignments are given, this will mean a total possible of 400 points can be accumulated. The student grade will be calculated as follows:

$$\text{Grade} = \text{Student's score} / \text{Total possible points} = \%$$

A final grade is then assigned as follows:

95 – 100%	A
90 – 94%	A-
87 – 89%	B+
84 – 86%	B
80 – 83%	B-
77 – 79%	C+
74 – 76%	C
70 – 73%	C-
67 – 69%	D+
60 – 66%	D
Less than 59%	F

Classroom Protocol:

Classroom Protocol is similar to the one students will find in a professional environment. Students are expected to arrive on time and be prepared to participate. Laptop use is allowed only for a class purpose. No cell phones allowed time.

Schedule:

This is a proposed schedule. It may change according to class progress or students interests.

Session 1	Chapter 1 Intro to Ops, Project planning	Lecture, exercises
Session 2	Chapter 2 Competitiveness, Productivity	Lecture, exercises, research
Session 3	Chapter 18 Waiting lines	Lecture, exercises, research
Session 4	Chapter 3 Forecasting	Lecture, exercises, research
Session 5	Review	Exam #1
Session 6	Chapter 4, 4S Product and Service Design	Lecture, exercises, research
Session 7	Chapter 11 Supply Chain Management	Lecture, exercises, research
Session 8	Chapter 12 Inventory Management	Lecture, exercises, research
Session 9	Review	Exam #2
Session 10	Chapter 9 Management of Quality	Lecture, exercises
Session 11	Chapter 10 Quality Control	Lecture, exercises, research
Session 12	Chapter 14 MRP and ERP	Lecture, exercises, research
Session 13	Chapter 15 JIT and Lean	Lecture, exercises, research
Session 14	Chapter 19 Linear Programming	Lecture, exercises
Session 15	Review	Exam #3, Project due (if assigned)

Faculty Information:

Dr. Kruz is a full-time industry consultant. His expertise includes operations, engineering, and project management, as well as systems integration in various industries. His research includes competitiveness, innovation, and business performance areas. He also teaches data analytics, industrial systems design (SCADA), and Computer Networks and is a published author.
